2 JUL 1966

MEMORANDUM FOR DR. FLAX

SUBJECT: MCL Comparison Study Briefing for the Secretary of
Defense

In early July 1966, a MCL presentation was given to Mr. McManara on the West Coast. During discussions at that presentation Dr. Brown suggested that it would be useful for Mr. McManara to review at some later date additional information relative to the performance of the DORIAN sensor. In response, a presentation was prepared, structured as a resume of the factors important to achieving [redacted] ground resolution with the MCL/DORIAN camera, together with a summary of the recent comparisons of a wholly unmanned system using the DORIAN camera, with the MCL configuration.

On 1 September 1966, when you were not available, Dr. Brown was given a "dry run" of this presentation at his request.

With but few changes, Dr. Brown agreed with the scope and content of the presentation, and requested that it be reduced to printed form accompanied by a brief narrative text. It was Dr. Brown's intention to forward the presentation in this form to Mr. McManara for information, and to note that a verbal briefing was also available if more detail was desired.

Attached are two copies of the document requested by Dr. Brown for your review, and subsequent transmittal. The comments of General Stewart have been included.
